Online 1 Set 3:

July 2023 CSE 102

Conditional Statement & Loops

Full Marks: 10

Iterative Sequence

Problem Statement:

Write a C program that takes a non-negative integer number N as input, forms and prints the following sequence and finally finds out the sum of the series up to N terms.

1 + 12 + 123 + 1234 + …….

Restrictions:

You cannot use one/multi-dimensional arrays or any other data structures. You cannot call any library functions (except scanf, printf).

Sample Input/Outputs:

Sample Input:	Sample Output :
3	1+12+123=136
4	1+12+123+1234=1370
2	1+12=13

Submission Guidelines:

- ➔ Solve the problem and rename the file as <your_id>.c (Example: student with ID 2205999 will rename it as 2205999.c).
- ➔ Then upload the .c file in Moodle.
- ➔ **Do not copy from your classmate. In this case both of you will get -100%. Also do not copy code from any website or ChatGPT. You will get -200% in this case.**
