July 2023 CSE 102

Online 2

Time: 25 mins

Problem:

Given an unsorted array of size n. Array elements are in the range of 1 to N. One number from set {1, 2, …N} is missing (say x) and one number occurs twice (say y) in the array. Find these two numbers. See sample input output for better understanding.

Input:

First line of the input takes an integer N denoting the size of the array. Second line of the input contains n space separated integers which are elements of the array.

Output:

Missing and repeating integers in the following format

Missing = x

Repeating = y

Sample input	Sample output
3 3 1 3	Missing = 2 Repeating = 3
5 2 4 3 1 1	Missing = 5 Repeating = 1

Guideline:

Solve the problem and rename the file as <your_id>.c (Example: student with ID 2205999 will

rename it as 2205999.c). Then upload the .c file in Moodle.
