July 2023 CSE 102
Online on Pointers

Full Marks: 10 Duration: 25 minutes

Problem Statement:

Your task is to write a C program that has following features-

1. Create 2D array using DMA and scan the elements
2. Print the array
3. Rotate the array (First Transpose it then Reverse the columns)
4. Print the rotated array
5. Free the allocation space.

Constraint:

YOU **CANNOT** USE [] OPERATOR ANYWHERE. YOU MUST USE POINTER.

You **cannot** use global variables.

You **can** create your own helper functions.

Sample Inputs/Outputs:

Input	Output
3 3 1 2 3 4 5 6 7 8 9	7 4 1 8 5 2 9 6 3

Submission Guidelines:

- ➔ Solve the problem and rename the file as <your_id>.c (Example: student with ID 2205999 will rename it as 2205999.c).
- ➔ Then upload the .c file in Moodle.
