January 2026 CSE 314

Online Assignment on Bash Scripting

Time: 30 minutes

Subsection C2

You are preparing the final delivery folder for the World Cup final between Argentina and Spain. Approved files are identified by filenames beginning with `FINAL_`, but they are scattered throughout `input_dir`.

Your script must collect the approved files without losing their original directory structure.

Command

```
./online-2205XXX.sh input_dir output_dir
```

Output

1. Create:
   ```
   output_dir/package/
   ```
2. Search recursively for regular files whose filenames begin with `FINAL_`. Matching is case-sensitive.
3. Copy every selected file into `output_dir/package/` while preserving its path relative to `input_dir`. For example:
   ```
   input_dir/var/video/FINAL_replay.dat
   ```
   must become:
   ```
   output_dir/package/var/video/FINAL_replay.dat
   ```
4. Create `output_dir/manifest.txt` containing the relative path of every copied file.
5. Sort `manifest.txt` alphabetically.
6. Create `output_dir/count.txt` containing only the total number of copied files.

Sample Input (`input_dir/`)

```
input_dir/
├── broadcast/
│   ├── FINAL_scoreboard.txt
│   └── draft_notes.txt
├── var/
│   └── video/
│       ├── FINAL_replay.dat
│       └── test_clip.dat
└── reports/
    └── FINAL_summary.log
```

Sample Output (`output_dir/`)

```
output_dir/
├── package/
│   ├── broadcast/
│   │   └── FINAL_scoreboard.txt
│   ├── reports/
│   │   └── FINAL_summary.log
│   └── var/
│       └── video/
│           └── FINAL_replay.dat
├── manifest.txt
└── count.txt
```

Contents of `manifest.txt`:

```
broadcast/FINAL_scoreboard.txt
reports/FINAL_summary.log
var/video/FINAL_replay.dat
```

Contents of `count.txt`:

```
3
```
