IPC Online

Section: C2

Time: 30 min

Run three threads.

a. Thread1 prints ‘A’ in an infinite loop
b. Thread2 prints ‘B’ in an infinite loop
c. Thread3 prints ‘C’ in an infinite loop

Now, these three threads should run independently. At each iteration, L letters are printed in a line followed by a $. There are N iterations.
Input format: <iteration count> <number of letters per line>

Input: 3 10
Output:

ABCBCBCBAC$ [iteration 1]
CBAABCACBB$ [iteration 2]
BACBCABABA$ [iteration 3]

Note that the letters can appear in any sequence.

Implement this using one semaphore only.

Create a file `<student_id>.cpp` and submit it.
