Installing VScode and Compiler

Some Important Links

- For installing mingw-
  - https://www.youtube.com/watch?v=FEeFG9OR-QU
  - https://genome.sph.umich.edu/wiki/Installing_MinGW_%26_MSYS_on_Windows
  - https://ics.uci.edu/~pattis/common/handouts/mingweclipse/mingw.html

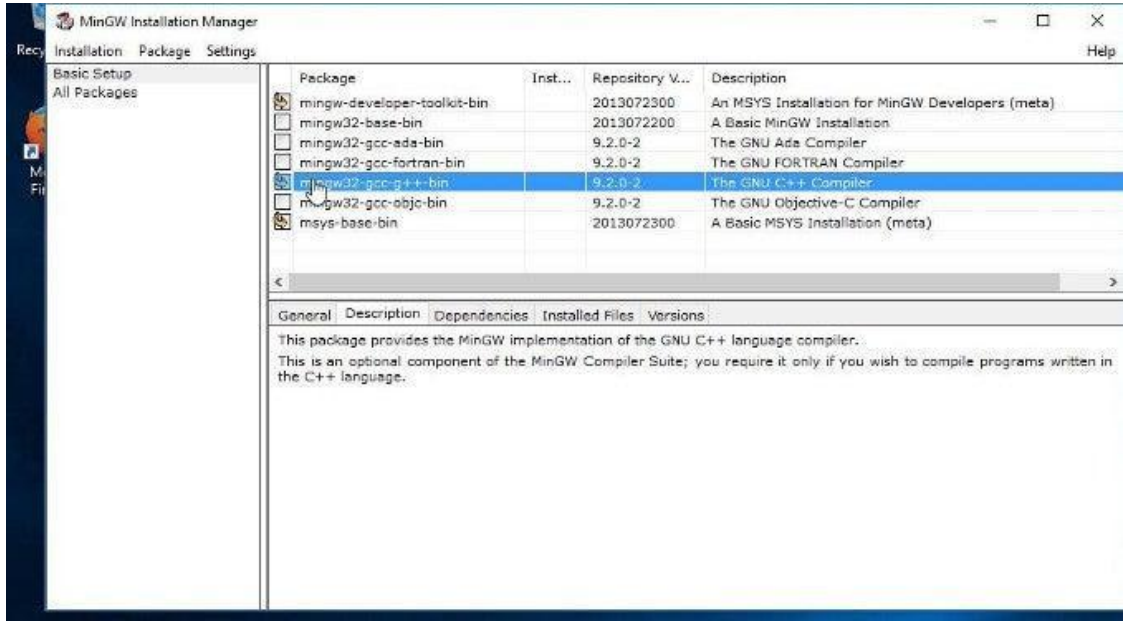

GNU on Windows with MinGW

- Download mingw-get-setup.exe from –
  - https://www.techspot.com/downloads/7179-mingw.html
- Once downloaded go through the setup by clicking through the installation wizard to completion.

Install GCC on Windows

- First, select **mingw-get** from your application menu to launch it.
- To install GCC, click the GCC and G++ package to mark GNU C and C++ compiler for installation. To complete the process, select **Apply Changes** from the **Installation** menu in the top-left corner of the mingw-get window.

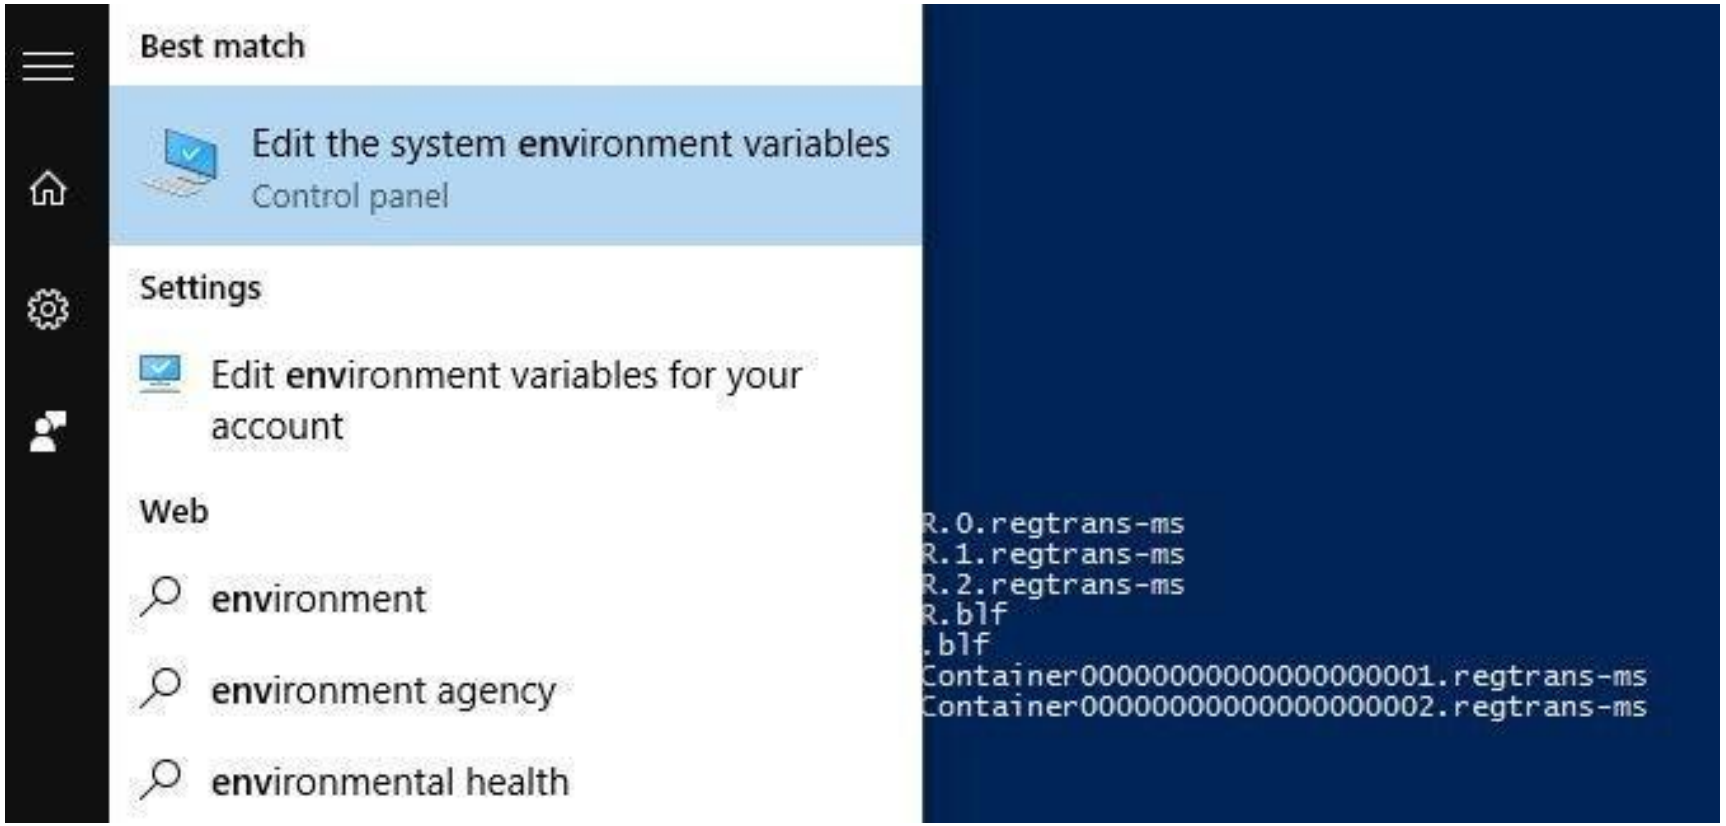

Check

- Once GCC is installed from powershell run
  - `PS> C:\MinGW\bin\gcc.exe --version`
  - And you will see something like

```
gcc.exe (MinGW.org GCC Build-x) x.y.z
Copyright (C) 2019 Free Software Foundation, Inc.
```

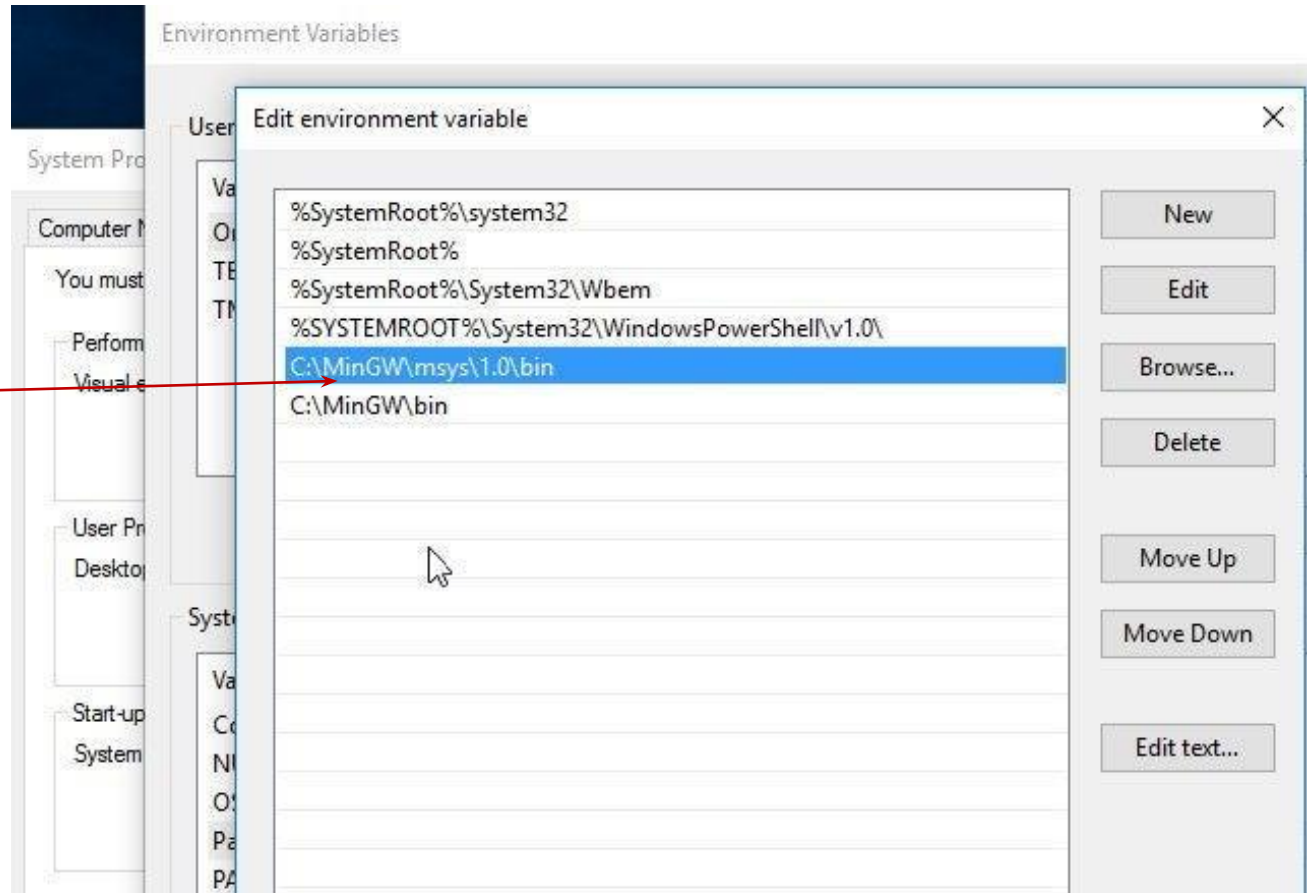

Set the path on Windows

- To modify your environment in Windows, click on the application menu and type env.

Set the path on Windows – cont

- A Preferences window will open; click the **Environment variables** button located near the bottom of the window.
- In the **Environment variables** window, double-click the **Path** selection from the bottom panel.
- In the **Edit Environment variables** window that appears, click the **New** button on the right. Create a new entry reading **C:\MinCW\bin** and click **OK**. Create a second new entry the same way, this one reading **C:\MinGW\bin**, and click **OK**.
- Accept these changes in each Preferences window. You can reboot your computer to ensure the new variables are detected by all applications, or just relaunch your PowerShell window.
- From now on, you can call any MinGW command without specifying the full path, because the full path is in the %PATH% environment variable of your Windows system, which PowerShell inherits.

Hello world

- You're all set up now, so put your new MinGW system to a small test. Write the following code on a text editor (ex: notepad)
- Save the file as hello.c, then compile it with GCC:
- PS> gcc hello.c
- And, finally, run it:
- PS> .\a.exe

Hello World!

PS>

```c
#include <stdio.h>

int main() {
  printf("Hello World!");
  return 0;
}
```

VScode installation

- Follow this tutorial
